Title: **Servicing and Redress Kits**

Issued By: IM

Date Issued: 17-Nov-09

Circulation: *See List*

There are a number of servicing and redress kits available for Guardian products:

- Ready Box Kit (RBK):

This kit contains various fasteners and parts which may need replacement or be lost during routine servicing. An RBK is supplied with each new instruments or pair of instruments.

- Recommended Spares List (SL):

This kit comprises a list of all wear parts and other items which may require replacement over extended operations. It also includes a set of circuit boards. It is generally intended that a client selects the items they require from this list rather than ordering the entire Spares List. Part Number format: XXX-93YYY.

- Redress Kits (RK):

There are three levels of redress kit available for Guardian products:

Level 1 – Contains a full set of o’rings for the product. Part Number format: XXX-84YYY.

Level 2 – Contains level 1 parts together with special seals and feedthrough connector assemblies. Part Number format: XXX-85YYY.

Level 3 – Contains all level 1 and 2 parts together with bearings and other longer term maintenance parts. Part Number format: XXX-86YYY.

Lists of the specific parts supplied in each kit for a given product are available on request.

- Field Service Kit (FSK):

The Field Service Kit is a kit of consumable parts intended to support operations for one instrument for a period of approximately 6 months at 4 jobs per month. Part Number format: XXX-933YY.

NB. The part number for a particular servicing or redress kit can be derived from the part number of the parent instrument; e.g. An Addressable Release Tool (ART-H) is p/n 116-99003. Its corresponding level 2 redress kit will be 116-85003.

As Ready Box Kit part numbers cannot be derived from the parent instrument part number, they are listed below:
